P. LINDBERG INDUSTRI SINCE 1855

# Who are we?

**We are the problem solvers of the industry,  
and our solutions are based on generations of  
experience in industrial craftsmanship.**

P. Lindberg was established in 1855 and has since developed from an agricultural smithy with local customers into a modern, specialised company with customers throughout the country – without compromising the time-honoured qualities and virtues of good craftsmanship.

In the same spirit, we perform specialised tasks in all kinds of steel, aluminium and other metals, and provide industrial fitting services in many sectors.

Since 2020 Lars Hansen has been the sole owner of P. Lindberg Industri A/S.

P. LINDBERG INDUSTRI SINCE 1855

# Our competencies

In 2014, we achieved certification to EN 1090, EN 3834 and ISO 9001 and can therefore meet the very latest requirements on quality and documentation in all our products, machines and services.

We design, manufacture and deliver steel structures for the building sector in accordance with the latest requirements of the EU Construction Products Regulation, incl. CE marking.

We assure quality throughout the entire process to ISO 9001 and EN 3834.

Our metal workers and fitters possess a broad range of certificates for the TIG, MAG and arc welding of stainless steel, mild steel and aluminium.

We are approved to manufacture and repair machines and equipment for food industry firms according to the requirements of the Danish Veterinary and Food Administration.

P. LINDBERG INDUSTRI SINCE 1855

# Quality on time - that's our motto

P. Lindberg Industri A/S performs specialised tasks in all kinds of steel, aluminium and other metals, and provides industrial fitting services in many sectors.

We offer assistance either in our customers' own workshops or in our own well-equipped 4000 m<sup>2</sup> workshop.

Our skilled production workers are always ready to turn out at a moment's notice. Our customers therefore enjoy the benefits of variable labour costs rather than fixed.

We have many years' experience of the requirements made on good suppliers, and endeavour to be one of the leading suppliers in the industrial sector.

We achieve this by:

Combining superior craftsmanship with a good portion of creativity, and ensuring that our employees focus on the things that benefit the customer the most in the long term.

Gaining an in-depth understanding of individual customer's production methods and products.

Constantly updating our knowledge of requirements and directives concerning CE documentation, the environment and occupational health and safety.

Maintaining the company's dynamism and strength! This can't be done with courses and certificates alone, however. Our skilled employees take pride in good craftsmanship – and are continually kept up to date professionally so that we can live up to our motto...  
Quality on time.

P. LINDBERG INDUSTRI - SERVICES

# Process industry

Production of stainless steel tanks and other processing equipment to customer specifications and requirements on finish is also one of our core competencies.

We often work closely with customers on the planning, design, manufacture and fitting of tanks, pumps, valves, etc.

Whatever the solution, our aim is to supply high quality craftsmanship at the agreed time and price.

It is crucial to us that all our solutions meet customer requirements.

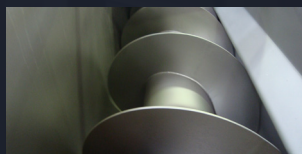

P. LINDBERG INDUSTRI - SERVICES

# Food industry

We design, manufacture and install stainless steel solutions for customers who produce and/or process food.

This entails high demands on quality and finish, something that our employees take pride in supplying.

We know what it takes to provide machinery and equipment that combine requirements on quality, hygiene and traceability.

Naturally, we are approved by the Danish Veterinary and Food Administration to manufacture equipment that comes into direct contact with food products.

P. LINDBERG INDUSTRI - SERVICES

# Wind industry

The company has more than 20 years experience in the design and manufacture of customised solutions for the wind turbine industry.

Through positive dialogue between our design team and customers, who naturally possess valuable process know-how, we have developed specialised equipment for the industry, among other things for handling wind turbine blades

within the overall production flow.

We also draw up complete CE documentation in accordance with the EU Machinery Directive. Once developed, the equipment is adapted to the customers production sites around the world.

In addition, we have manufactured steel structures and moulds for use in the production of wind turbine blades.

P. LINDBERG INDUSTRI - SERVICES

# Machine construction

The design and construction of mechanical equipment for a variety of sectors is something we've specialised in for many years.

When we started, customers' ideas were simply sketched with pencil and paper while the machinery took form in the workshop.

Naturally, the procedure has changed dramatically since then, but the ongoing dialogue with customers on wishes and requirements is still firmly in focus.

We usually design our new machines in Solid Works 3D CAD, software in which all our design engineers excel.

P. LINDBERG INDUSTRI - SERVICES

# Building and construction

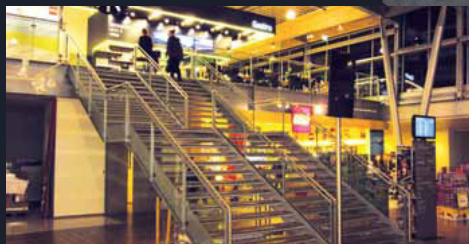

We create almost anything in building and construction steel up to Execution Class 3.

We can complete most tasks in this field thanks to the many certificates and WPSs we possess within MAG and arc welding.

All building steel is CE marked, processed to current DS/EN 1090-2 standards and quality assured to DS/EN ISO 3834.

Our experience is based on more than 25 years of working with everything from column and beam structures, balconies, girders, stairs, etc. to small and large building projects throughout the country.

We follow the project throughout – from quotation through sizing and design to manufacture and installation. We offer all declaration methods according to DS/EN 1090-1 (methods 1, 2, 3a and 3b).

P. LINDBERG INDUSTRI - SERVICES

# Operations and maintenance

As a final service after finishing a task, we draw up an operation and maintenance plan.

By doing so, we ensure that the product subsequently operates safely, efficiently and reliably.

We also offer standard service and maintenance of machinery and structures not built by us.

Our many years of experience from various companies means that we are very flexible in this area.

Our fitters have the experience and skill it takes to guarantee our customers the best solution. We always try to send the same fitters to individual companies, thus strengthening customer knowledge.
